***Reasons For Allowance***

None of the references disclose a printed circuit board having a plurality of optoelectronic components coupled to a first side of the printed circuit board, forming a first clad layer outwardly from the first side of the printed circuit board, coupling an injection mold to the first side of the printed circuit board, injecting a material into the mold in liquid form, and after the material is solidified, decoupling the injection mold from the first side of the printed circuit board, thereby forming an optical waveguide outwardly from the first clad layer.
